

V-MAC SILOS

V-Mac Wide Tote Bin

KEY FEATURES

- **Strong**
manufactured out of 2mm hot dipped galvanised steel.
- **Moveable**
built-in skids for forklift or teleporter.

FORELIFT SKIDS

- **Adjustable legs**
Tote bin can be raised 80cm or 100cm.

LEG PINS

- **Fully covered**
animal feed is protected from vermin and weather.
- **Integrated Bagging Hooks**
allow for bags to be easily filled.

BAGGING HOOKS

V-Mac Wide Tote Bin

McAree Engineering have added the new Wide Tote bin to their range. Manufactured out of 2mm mild steel, it is robust and strong and is ideal for moving quantities of feed around farms in a clean and convenient manner.

With dimensions of 156cm high, 240cm wide and a depth of 125cm, the tote bin is very portable - with skids built into the base it can easily be moved by a forklift or teleporter. The support structure, telescopic legs, lid and body are fully galvanised. Inside the bin support beams provide additional body strength.

The discharge chute is offset to the front of the silo. This allows the design of the tote to have deep angle sides which promotes excellent flow of feed to the chute.

Telescopic legs are built into the leg mounts which allow you to raise the discharge chute 80cm or 100cm off the ground allowing you to fill buckets or barrows easily. Integrated bagging hooks enable you to fill up to half ton bags if required. The legs can be bolted in place making the Tote Bin a fixed item.

Optional Weather Pack

We can fit the tote with an additional weather pack which provides increased protection from the weather. We fit a rubber seal between the overlapping lids with rubber clasps to make the lid watertight. Rubber brushes are riveted to the top of the tote body to help prevent water from being blown into the tote bin under the lid.

- **Adjustable legs**
Tote bin can be raised 80cm or 100cm.

LEG PINS

- **Fully covered**
animal feed is protected from vermin and weather.
- **Integrated Bagging Hooks**
allow for bags to be easily filled.
- **Molded Handles**
PVC handles make opening and closing the lid easy

MOLDED HANDLES

V-Mac Standard Tote Bin

Used by animal feed companies throughout Ireland, the V-Mac standard Tote Bin is one of the most versatile, meal handling bins on the market. We have now redesigned the tote bin to make it even more flexible. Manufactured out of 2mm mild steel and galvanised throughout, it is robust and strong and is ideal for moving quantities of feed around farms in a clean and convenient manner.

The Tote bin can be used for bringing to your local merchant for filling; for bringing meal away from the farm; for use as an alternative to ton and half ton bags - simply pour the bags into the tote bin and you can easily fill smaller bags, buckets or barrows without the back breaking bending. The Tote Bin avoids having to deal with vermin getting into the bags - nothing is wasted.

With dimensions of 165cm high, 150cm wide and a depth of 125cm, the tote is easily transportable – with skids built into the base, it can be moved by forklift or teleporter.

The contents can be emptied out using the simple lever mechanism into buckets or troughs. The galvanised lid fully encloses the top of the tote bin protecting the contents from vermin and weather damage. The lid locks in place with connecting bars hooking into lock notches. To open the lid all you do is lift the lid upwards off the notches using the molded plastic handles and slide the lid along the top of the tote. Then move to the back of the tote and gently pull the lid towards you. The lid will hinge on the connecting bars at the back of the tote. To close the lid simply reverse the process.

Telescopic legs are built into the leg mounts which allow you to raise the discharge chute 80cm or 100cm off the ground allowing you to fill buckets or barrows easily. Integrated bagging hooks enable you to fill up to half ton bags if required. The legs can be bolted in place making the Tote Bin a fixed item.

Standard Dimensions

Height 165cm, Width 150cm, Depth 125cm
